

Using Text Animation via AAPower Extension

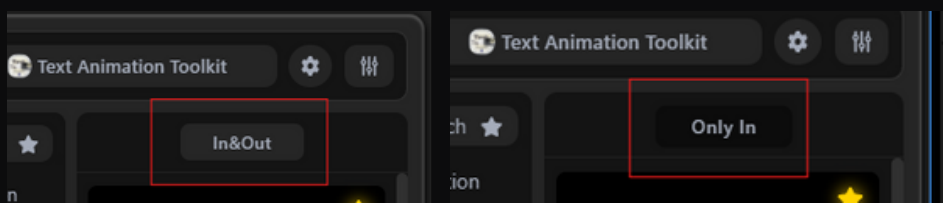

The most convenient and fastest way

- 1 Select the text layer to which you want to apply animation.

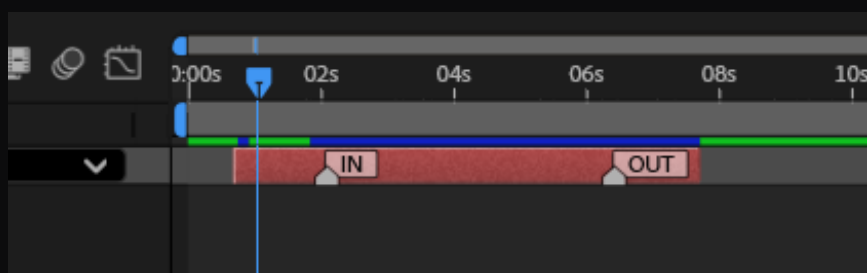

- 2 Select the desired animation mode.

→ IN/OUT will apply animation for both appearance and disappearance.
→ Only In will apply only appearance.

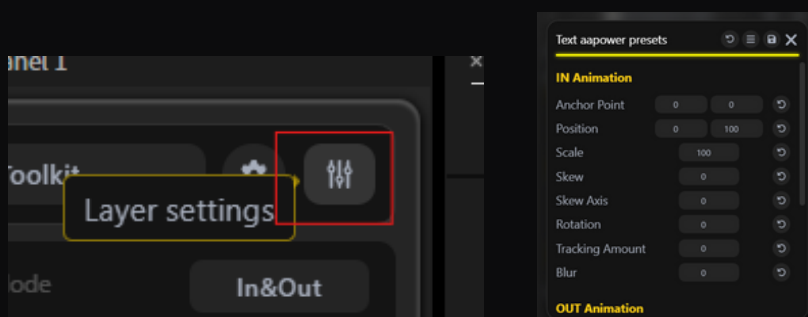

- 3 Double-click the preset preview in the AAPower window.

→ The effect will be added in the desired resolution and duration.

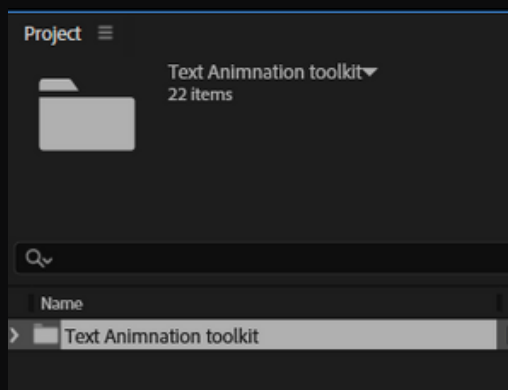

- 4 Customize the parameters: Click the "Layer Settings" button in the extension and simply change the values.

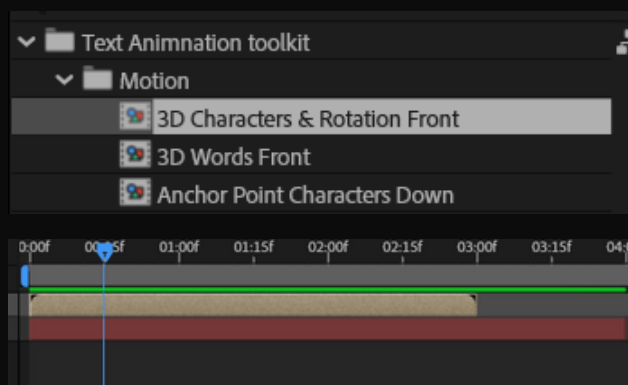

Using Transitions via After Effects Projects (.AEP)

If you do not want to use the extension

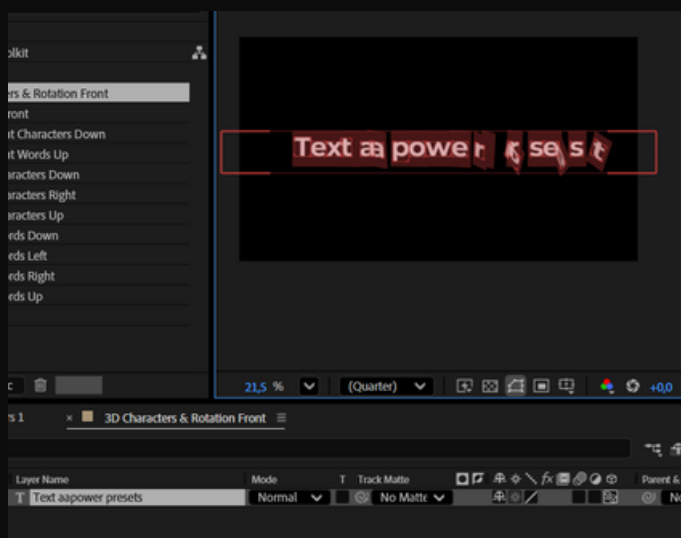

- 1 Import the included .AEP file into your project.

- 2 Drag the desired composition onto your timeline.

- 3 Go inside the composition and simply replace the text with your own.
